Dear Hiring Manager:

Hello!

I believe I have the necessary skills and interests to succeed as a web specialist at Tyler Technologies and I'd love to apply for the role. To view a demonstration of my qualifications for this position, please [click here](#). This page was built entirely by copying existing code from the Tyler site, editing it in JSFiddle to meet my needs, and publishing on GitHub.

I started down my current career path by receiving a bachelor's degree in technical communication, which involved courses like Advanced Web Design, Information Design, and Usability Testing. After college, I began working in content development and marketing roles at technology companies and as a freelance thought leadership ghostwriter. In every role of my career, I have worked with HTML, CSS, JavaScript, XML, or SQL to varying degrees. Multiple project stakeholders have vouched for my ability to understand and manipulate these languages to achieve the desired result.

I have created and edited templated websites on Weebly, WordPress, Squarespace, and Wix, and I have edited content on a web-based software built entirely in WordPress for Business. The [site I currently use](#) for freelancing was created on Weebly and all content was successfully migrated to Squarespace. I own my own domain through GoDaddy and have connected it to G Suite and Squarespace. I traded a local graphic designer copywriting for a logo and brand fonts and colors, which I implemented throughout my site for a cohesive brand experience. I have also worked extensively with Google Analytics, Admin Console, Search Console, Keyword Planner, AdSense, Ads, and more.

In addition to my technical and web design-related skillsets, I have managed more than 125 creative projects, drafted and sent more than 105 marketing emails, been responsible for thousands of online help topics, and created more than 50 process tutorial videos. As a freelancer, I have written for more than 85 brands including Microsoft and American Airlines, and more than 120 of my ghostwrites have been published on third party publications including GovTech, ReadWrite, Entrepreneur, Inc.com, and Forbes. I have also received HubSpot certifications in content marketing, inbound, and inbound marketing; Advanced Google Analytics and Google Analytics for Beginners certifications from Analytics Academy; and recognition for my full-time and freelance work from both external clients and internal stakeholders.

I feel I have proven my efficacy in content creation and would like to progress my career by mastering new skillsets. My goal is to move away from writing-centric roles and into more technical and analytical roles. I'm interested in data mining and analysis, information design, content publication, and search engine optimization (SEO) in particular. I'd like to play a vital role in creating, maintaining, and optimizing online marketing content, and believe I can do so for the Tyler marketing team by:

- Ensuring consistency of visual design and content tone across web presence to solidify brand to market
- Managing Google Analytics, studying and reporting on trends, and using those findings to advise on content
- Ensuring thorough and accurate use of SEO best practices across web presence to increase search result rankings and digital footprint

Please feel free to view my [LinkedIn profile](#) or my attached resume for more specifics on my experience. I look forward to working with you.

Thanks for your time!

Sincerely,

Jordan Heatwole

Jordan Heatwole

Reskin Online Help Systems

“With Tyler rolling out TUX and unifying the look and feel of our software, the Interactive Content Department needed to completely update the user interface of our online help systems. Jordan was a part of this process from start to finish and helped with anything needing to be done.

After the new online help UI was created in Adobe RoboHelp, deploying the skin to multiple help systems was quite complicated. Jordan took the lead on this project. She defined a step-by-step process, implemented her system, and changed the UI on at least 11 online help systems. Along the way, she trained other team members on how to reskin their RoboHelp projects.

Although this project involved learning new skills, Jordan jumped right in and went above and beyond to gain expertise and help the team. We couldn't have done it without her.”
